CONFIDENTIAL PROPOSAL

Sanctuary Digital Sales Experience

From first inspiration to a confident home decision

A phased proposal to prove the interactive configurator and connect it to a complete digital sales journey.

PREPARED FOR

Sanctuary Hill Country

DATE

July 2026

EXECUTIVE SUMMARY

A configurator that supports the entire sales journey

Sanctuary has already established the essential ingredients: a distinctive lifestyle proposition, a broad collection of home plans, three design schemes - Air, Water, and Earth - and a meaningful range of upgrades. The next opportunity is to make those choices feel clear, personal, and easy to explore.

The proposed 360-degree configurator is a strong foundation. We recommend beginning with one representative home, proving the experience in the browser, and using what we learn to design a connected digital sales system that can grow across the full Sanctuary portfolio.

> THE PRINCIPLE
>
> **Not a game to learn. A calm, intuitive way to see what is possible and move forward with confidence.**

One connected experience. Three moments.

01	02	03
Discover	**Personalize**	**Decide**
The public website communicates the vision, location, home collection, and possibility of personalization.	Qualified prospects explore a selected home, compare finishes and add-ons, and understand indicative investment.	A sales advisor guides the final configuration on-site or remotely, then shares a clear proposal and next step.

Why this approach

- It delivers the interactive experience requested today.
- It avoids rebuilding the same logic for the website, sales team, and showroom.
- It creates a scalable foundation for pricing, CRM, proposals, and future VR.
- It introduces deeper interaction when buyer intent is highest.

INITIAL ENGAGEMENT

Configurator Pilot

The pilot will turn one Sanctuary home into a working, mobile-friendly configuration experience. It is intentionally focused: enough scope to prove visual quality, loading performance, interaction design, and the asset-production workflow before scaling to every home.

1	3	2	1
PILOT HOME	DESIGN SCHEMES	GEOMETRIC ADD-ONS	INTERIOR ROOM

Pilot experience

- Rotate the exterior through 360 degrees with a fixed, curated camera angle.
- Switch between Air, Water, and Earth exterior schemes.
- Add or remove two geometry-changing options, such as a pool, sauna, or terrace.
- Step inside one room and look around in 360 degrees.
- Change the interior scheme without losing the current viewpoint.
- See selected options and indicative price changes in a clear summary.

Pilot deliverables

DELIVERABLE	WHAT IT PROVIDES
Working web prototype	A responsive experience for agreed desktop and mobile devices.
Optimized pilot assets	Web-ready exterior geometry, materials, add-ons, and interior panoramas.
Configuration model	A reusable structure for options, compatibility rules, and price adjustments.
Performance report	Measured load, memory, and interaction results on target devices.
Scale-up plan	Effort and production assumptions for the remaining home catalog.

STRATEGIC EXTENSION

Digital Sales Experience Blueprint

While the pilot proves the technology, the Blueprint defines how the configurator can support the full buyer journey. It connects inspiration, qualification, guided selection, and proposal creation without forcing every visitor into the same level of complexity.

01 Inspire. Storytelling, location, lifestyle, homes, amenities, and a concise demonstration of personalization.

02 Qualify. A short guided flow that identifies the right home, budget range, timeline, and visit preference.

03 Configure. A personal link where the prospect can explore the relevant home, schemes, upgrades, and indicative price.

04 Guide. A sales-assisted session on a large screen, through screen sharing, or at the Sanctuary location.

05 Propose. A saved configuration, structured summary, PDF proposal, and CRM-ready record for follow-up.

06 Continue. A future client portal for design selections, approvals, changes, and construction communication.

> THE VALUE
>
> **One source of truth for the home, the options, the price, and the buyer's current decision.**

Blueprint deliverables

- Buyer journey and experience map.
- Public website, private configurator, and showroom roles.
- Information architecture and key screen flows.
- CRM, pricing, proposal, and analytics integration plan.
- Prioritized roadmap, implementation phases, and rollout budget model.

DELIVERY APPROACH

Unreal quality, delivered for the web

The Unreal Engine project remains the visual source. The browser receives a purpose-built version of each experience: optimized geometry for interactive exterior configuration and high-quality panoramic renders for interiors.

01	02	03
Prepare	**Optimize**	**Experience**
Audit the Unreal project, separate configurable components, bake complex materials, and define the pilot option matrix.	Deliver compressed GLB geometry and KTX2 textures through a CDN, loading only the selected home and likely next options.	Use a lightweight web viewer, a separate configuration layer, and progressive loading for smooth interaction.

Recommended technical stack

LAYER	RECOMMENDATION	ROLE
Exterior	Three.js	Real-time 3D rotation, material changes, and modular add-ons.
Assets	GLB + Meshopt + KTX2	Compact geometry and GPU-friendly compressed textures.
Interior	Photo Sphere Viewer	Tiled 360-degree panoramas with smooth scheme transitions.
Configuration	JSON/API rules	Options, compatibility, price adjustments, and saved state.
Delivery	CDN + lazy loading	Fast first view without downloading the full catalog.

Two valid exterior routes

ROUTE	BEST WHEN	TRADE-OFF
Real-time web 3D	There are many independent finishes and geometry-changing add-ons.	Best scalability; requires careful asset optimization and a web-specific material pass.
Render-based 360 spin	The camera is fixed and exact Unreal render fidelity is the priority.	Very consistent visuals; asset volume grows as full combinations increase.

The pilot will confirm the best route using an actual Sanctuary home rather than assumptions.

PLAN

A phased engagement with clear decision points

PHASE	FOCUS	INDICATIVE TIMING	DECISION
1. Discovery	Asset audit, pilot home, option matrix, target devices.	3-5 business days	Confirm production route and pilot plan.
2. Pilot	Working exterior and interior configuration experience.	2-4 weeks	Approve quality, performance, and scale assumptions.
3. Blueprint	End-to-end digital sales journey and integration roadmap.	1-2 weeks, partly parallel	Select MVP modules and rollout sequence.
4. Rollout	Priority homes, CRM, proposal flow, showroom, and catalog scale-up.	Scoped after pilot	Release in measured stages.

Commercial structure

The initial engagement is proposed as one fixed-scope package combining Discovery, the working Configurator Pilot, and the Digital Sales Experience Blueprint. Investment will be finalized after a short asset review.

The full rollout is then priced transparently as:

- Platform and experience implementation.
- Asset production per home type.
- Asset production per geometric add-on.
- Interior panorama production per room and design scheme.
- CRM, proposal, pricing, or showroom integrations.

Inputs required from Sanctuary

- One complete Unreal project in the correct engine version, including required plugins.
- Source models and textures where available, plus the right to use all third-party assets.
- The pilot option matrix, pricing source of truth, and compatibility rules.
- Access to the current website environment and one decision owner for feedback.

Reserved for rollout

Full-catalog asset production, production CRM integration, checkout, VR headset deployment, multilingual content, and the ongoing client selection portal are not included in the pilot. They are intentionally scoped after the pilot confirms the right experience and production model.

OUTCOME

What success looks like

The successful experience should feel as considered as the community itself: visually refined, simple to understand, and helpful at every stage of the buyer's decision.

- A visitor understands the possibilities without learning a complicated interface.
- A qualified prospect can personalize a relevant home and return to the same configuration.
- A sales advisor can continue the conversation from the prospect's saved choices.
- Upgrades are visible, understandable, and connected to indicative investment.
- The system can expand across the home catalog without rebuilding the experience.
- Analytics reveal which homes, schemes, and upgrades attract the most interest.

Recommended next step

Schedule a 60-minute asset and experience review. In that session we will select the pilot home, confirm the three schemes and two add-ons, review the Unreal source, and agree on the target devices and success criteria.

Following the review, we will provide the final fixed scope, investment, and kickoff schedule for the initial engagement.

> PROPOSED FIRST COMMITMENT
>
> **Approve the pilot direction and schedule the Unreal asset review.**

Build the configurator.
Prove the experience.
Connect it to the full sales journey.

SANCTUARY DIGITAL SALES EXPERIENCE
